CATALOGUE
OF THE
MOIR LIBRARY

1950

Printed by Jamieson & Munro, Ltd., 40 Craigs, Stirling

JOHN W. MOIR, C.M.G., F.R.S.G.S., F.Z.S.

PREFACE

History.

The Scottish Beekeepers' Association owes its most prized possession, The Moir Library, to the foresight and generosity of Mr. John W. Moir, C.M.G., F.R.S.G.S., F.Z.S., Empire builder, beekeeper, and bibliophile.

After an adventurous life in Africa, Mr. Moir retired to his native land, and in 1912 turned his attention to collecting books on bees. By 1916 he had acquired 167 volumes, and about this time he announced his intention to bequeath his books to The Scottish Beekeepers' Association. In order to give his fellow-beekeepers the benefit of his books during his lifetime, however, Mr. Moir later presented his Library to The Scottish Beekeepers' Association while continuing to house the books in his own home and to act as Hon. Librarian. The collection of books steadily grew, and by October, 1933, when the special catalogue number of The Scottish Beekeeper was issued, it comprised some 1270 items. With this increase in the size of the Library, the burden of administration became a heavy one for a man who had then exceeded the allotted span by more than ten years, and in 1936 the assistance of some friends and of the Edinburgh Public Libraries was sought. This arrangement continued for a few years, but illness intervened, and the Library was ultimately transferred to the care of the Edinburgh Public Libraries at the end of 1939. At this time there were 1799 books and pamphlets and 439 volumes or periodicals. These figures are now 2054 and 700 respectively.

Contents.

This collection of books is unique and covers a wide field. The antiquarian will find rare English books dating from the sixteenth century; the classical scholar will be able to study what Aristotle, Virgil and Pliny have to say on beekeeping; those with a knowledge of foreign languages will find books in French, German, Italian and other languages, and there is a wide range of American books. Many pamphlets have been obtained from research stations in this country, America and Europe, so that the advanced student may keep abreast of modern developments. Young people, students, practical beekeepers, as well as research workers, will find publications to suit them. Several copies of most of the popular text-books in current use are stocked so as to reduce the period of waiting for borrowers. Magazines, mostly British and American, but including also some in foreign languages, are added each year.

Procedure for Borrowing.

The Library is both a reference and a lending library. The books which are for reference only, that is, may not be sent by post, are con-

finer to works of exceptional rarity or value, and there is a general rule that the consent of the Convener of the Library Committee must be obtained before any book published prior to 1850 may be borrowed. The great majority of the books are, however, freely available to Associate Members of The Scottish Beekeepers' Association and to all beekeepers who are members of a District Association affiliated to the Scottish Beekeepers' Association.

Life Associate Members and Annual Associate Members are provided with a Library Card which enables them to borrow direct from The Hon. Librarian, S.B.A. Moir Library, Central Public Libraries, George IV. Bridge, Edinburgh, 1. Secretaries of Affiliated Associations are also provided each year with a Library Card, enabling them to borrow books for their members. Any beekeeper who is a member of an Affiliated Association, though not an Associate Member of the parent Association, may borrow books from the Library, but each request for books must be submitted by the Secretary, and must be accompanied by the Secretary's Library Card. Such books are sent only to District Association Secretaries for transmission to individual members.

The welfare of the Library is supervised by a Library Committee who are anxious to maintain the high standard of the Library, and to enhance its value to beekeepers. The Scottish Beekeepers' Association gives an annual grant to help to keep the Library up-to-date, but donations of books and periodicals will always be welcomed by the Committee.

Acknowledgments.

The Committee make grateful acknowledgment of their indebtedness to the Edinburgh Public Libraries for housing the Library, to Mr. Minto, Hon. Librarian, for his supervision and guidance; and to the Staff of the Central Reference Library for their unfailing courtesy and attention.

The preparation of this new catalogue has involved much time and labour, and special acknowledgment must be made to Miss Catherine L. Dickson, of the Central Reference Library, who has edited the catalogue, and to Mr. H. P. G. Young, a member of the S.B.A. Library Committee, who has helped in the work of re-classification. It is confidently anticipated that this new catalogue will greatly enhance the usefulness of the Library.

J. N. TENNENT,
Convener, Library Committee.

MAIN DIVISIONS OF THE CLASSIFICATION OF THE BOOKS

BEES AND BEEKEEPING. SF 514-SF 540.

	Page
SF 514 NATURAL HISTORY OF BEES	22
515 NATURAL HISTORY OF THE HIVE BEE	24
516 THE BEE IN LITERATURE AND FOLK LORE ...	32
517 HISTORY OF BEEKEEPING	34
518 BEEKEEPING IN ANTIQUITY	35

538 DISEASES AND PESTS	109
539 HONEY AND OTHER HIVE PRODUCTS	123
540 USES OF HONEY. MEDICINAL AND NUTRITIONAL VALUE	129

HOW TO USE THE CATALOGUE

This new list of books in the Moir Library is what is known as a classified catalogue, that is, a catalogue in which the books are arranged by subjects following the order of some predetermined system of classification. Though the catalogue may seem unfamiliar at first sight and difficult to consult, the effort required to master the technique of using such a catalogue will soon be found to be amply repaid. In a classified library personal users have the great advantage of being able to choose from the shelves the volume they consider most suitable for their purpose from among a collection of books on the same aspect of the subject in which they are interested. Obviously, if borrowers from a library which is operative for most only through the medium of the post are to enjoy this same advantage, the catalogue must perform the function of shelf classification and bring together like books on like subjects. In some respects the postal user of a classified catalogue listing every unit of the stock is better off than the personal user of the library whose choice is virtually limited to the books available at the time of his visit. In addition, though books or parts of books can be listed at several points in the catalogue, books may stand at only one point on the shelves, and some part of their value is always in danger of being overlooked. In the present catalogue books of multiple subject content have been analysed and each section catalogued at its appropriate subject number. It is this useful provision that gives rise to the double numbers that will be referred to later. The catalogue is in three parts—the main classified list, the author index (on green paper), and the subject index on pink paper. The indexes are the key to the main list.

To understand the symbols under which the books are listed, it is necessary to bear in mind that these combinations of letters and figures are but a small part of a much larger scheme covering the whole field of knowledge. It would serve no useful purpose to outline this complete system of book classification here, but the scheme is the one which was first applied to the huge collections of the Library of Congress in Washington, and which has been adopted throughout the Edinburgh Public Libraries system. In this scheme, which is arranged first by letters and then by numbers, the vast majority of the Moir Library books come within main class **S—Agriculture** and sub-class **SF—Animal Culture**. Some two hundred and fifty books not in class SF but still in part or in whole of interest to beekeepers are to be found preceding or following the main SF 514 to SF 540 list. These books bear the class numbers from the Library of Congress scheme that they would bear in a general library, those with class letters alphabetically before SF at the beginning and those with class letters following SF at the end. The truly bee-keeping classes SF 514–SF 540 can be quickly located in the catalogue by using the page number references in the table given above.

Main numbers (*e.g.*, SF 532 : Hives and appliances) are further divided by decimal numbers (*e.g.*, SF 532.5 : Specials parts of the Hive) and still further divided by divisions of the decimal numbers (*e.g.*,

SF 532.54 : Supers). This progressive division and sub-division results in a very close grouping of the books by subject matter and in some cases still further arranging numbers are added to bring together books on any given subject by the same author. These author numbers (*e.g.*, F 94 for Frow) follow the class number proper and the sample number SF 538.31 F 94 may be analysed into : Beekeeping : Diseases : Acarine disease : works by Frow. The marks are thus simply a convenient shorthand indication of subject by which books may be arranged and referred to and there will commonly be several books with the same class number. The real identifying number of a book is its accession or stock number (*e.g.*, [H1094] or [ML18]) given in brackets after the title of each book in the catalogue and this number should be quoted in addition to the class number in asking for books. Thus the catalogue proper must always be consulted as the indexes do not note such details.

Therefore **if you want a book and know the name of the AUTHOR** consult the **AUTHOR INDEX** under the known name and refer to the class mark shown against the short title of the book you require. When this is done you will find not only the book you seek but listed alongside it whatever other books the library possesses on the same topic. If author is unknown or unimportant and you want to **find out what is to be got on a given SUBJECT** consult the **SUBJECT INDEX** which will guide you from the name of the subject to its class mark and thereby to the place in the catalogue where all such books are listed.

In the indexes and in the catalogue itself double numbers sometimes appear, and these arise mainly as a result of several pamphlets on different topics having been bound together. Obviously, no subject listing can be complete unless each pamphlet of such a collection is separately entered along with others of a like nature. However, as the class mark of the bound volume differs from the subject number some such marks as, for example, SF 539.77 (*in* SF 525.4 S53) are not uncommon. In this instance the pamphlet—on the rendering of beeswax (SF 539.77)—is in a collection of S.B.A. technical "Papers" (SF 525.4 S53) which is, of course, the shelf arranging number. Thus, the entry under SF 539.77 is only there so that the book can appear listed alongside others on beeswax and it is the *in* number (SF 525.4 S53) and the stock number ([N781]) that should be quoted in asking for it.

To sum up. Consult either the Author or Subject Index first to obtain the class mark (subject mark) of the book you require, locate this in the main body of the catalogue and quote both the shelf number of the book and the stock number—the number in square brackets after the title. Give an alternative choice or list of choices whenever possible. If the latest edition of any book is in use an earlier edition will be sent unless specified otherwise. When any request cannot be satisfied on account of a book being on loan at the time of application, the borrower's name will be added to the waiting list and the book sent when available.

C. S. MINTO,
Hon. Librarian.

MISCELLANEOUS.
